

OSCR360 Customer Feedback:

College Security Team

"360-degree photos give us the whole picture, including depth, height, and width. With 360, you have a better perspective... how long the back hallways are, how the fieldhouse looks while it's empty. We even captured images in various lighting to reflect changes to the campus at night versus during the day. It's a true feeling of what the building layout is that you can't feel with a still image."

New York Sheriff's Office

"We are using OSCR360 to capture photos and floor plans of our schools. Every hallway, classroom, utility closet, etc. In the OSCR software, we are overlaying the school blueprints on the map and placing pins on those blueprints to virtually walk through the building.

The final projects will be uploaded to every single patrol vehicle in our fleet so that every officer and command personnel have access to the projects [at a moment's notice], should a critical incident occur."

Rhode Island Police Department

"Access to the completed [OSCR360] documentation will be available to all officers via desktops and MDTs. With the amount of buildings, confidently knowing your way around after just one tour is not realistic. With OSCR360, the officers can pull up a building and virtually tour the layout during down time or roll call trainings."

West Virginia Police Department

"I took [OSCR360] over to all of our high schools and middle schools and we completely shot every room... labeled and marked everything so we have a complete view/tour of every school in our jurisdiction. We gave that to the School Resource Officer so they can utilize that for various things, but specifically have it in case we had some sort of active shooter behind a barricade."

Arkansas Sheriff's Office

"We've taken it into our schools and marked that out – in case of an active shooter and stuff like that... Saving lives, that's the biggest thing."

OSCR360

Built from the voice of Law Enforcement, L-Tron's OSCR360 was developed to document scenes and to help agencies to better plan for emergencies. The OSCR360 Software provides a walk-through of any building/public space, while the OSCR360 Equipment captures entire scenes in minutes.

Currently, OSCR is being used by: Law Enforcement, School Resource Officers, School Administrators, Universities and Schools for course curriculum and active shooter planning, Attorneys, Fire Departments, Environmental Safety and Protection, and by Federal, State, Local & Private agencies.

A proud New York State business, L-Tron's Law Enforcement offerings have been deployed in over 3,000 municipalities across 50 states nationwide.

We have been working with, and for, Law Enforcement for more than 20 years, specializing in purpose-built equipment developed from your voice.
